ENERGYBAE

Empowering People with Renewable Energy Solutions

AI INTERN — PRACTICAL TASK BRIEF

Task Title	Solar Load Calculator — Electricity Bill to Excel Automation
Issued By	Energybae Founders, Pimpri, Pune
Deadline	48 hours from receipt of this brief
Submission	Email to energybae.co@gmail.com | WhatsApp 9112233120
Role	AI Intern / AI Engineer (Automation & Product Development)

1. Background & Context

Energybae works in the renewable energy space, helping businesses and homes switch to solar power. A key part of our sales process involves analysing a customer's electricity bill to calculate the correct solar system size they need.

Currently, our team does this manually:

- A customer shares their electricity bill (PDF or image)
- Our team reads the bill and extracts key data — units consumed, load, tariff slab, etc.
- This data is entered into an Excel sheet that calculates the recommended solar system size, estimated savings, and ROI

This process takes 15–30 minutes per customer and is done dozens of times a week. Your task is to automate it.

2. What You Need to Build

Build a system (tool, app, script, or workflow) where:

1. **Step 1:** A user uploads or pastes an electricity bill (PDF or image)
2. **Step 2:** The system reads and extracts the relevant data from the bill automatically using AI
3. **Step 3:** The extracted data is filled into the provided Excel template and the solar load is calculated
4. **Step 4:** The user receives a filled Excel file as the output — ready to use

You have complete freedom in how you build this. Use any tools, languages, or platforms you prefer.

3. Input Files Provided

You will receive two files along with this brief:

File	Description
Sample Electricity Bill	A real electricity bill (PDF/image) from a Maharashtra MSEDCL customer. Your system must read this and extract the relevant fields.
Solar Load Excel Template	The Excel sheet our team currently fills manually. Study the input fields carefully — your system must populate these fields automatically from the bill data.

Both files are shared via Google Drive. Link:
https://drive.google.com/drive/folders/1RWogoXpsfn6FzU7kjbsMF1ATd4rwUjB8

4. What We Will Evaluate

We are not looking for a perfect, polished product. We are evaluating how you think and how fast you can build a working solution.

Criteria	What we look for	Weight
It works	Upload bill → get a filled Excel. Even if rough.	**40%**
Correct data extraction	Key fields from the bill are read accurately by AI	**25%**
Excel output quality	The template is filled correctly, calculations are intact	**20%**
Code & approach clarity	You can explain what you built and why in 2 minutes	**10%**
Bonus: UI or automation	A simple interface, Zapier flow, or web form is a plus	**5%**

6. Submission Instructions

Submit within 72 hours of receiving this brief. Your submission must include:

1. A working demo — video recording, live link, or GitHub repository
2. The filled Excel output generated from the sample bill provided
3. A brief note (3–5 sentences) explaining what you built, what tools you used, and what you would improve next

Send to:

- Email: pranay@energybae.in | Subject: AI Intern Task — [Your Name]
- WhatsApp: +91 9112233120

7. Important Notes

•	Do not wait for all edge cases to be handled. A working 80% solution is far better than a perfect solution that isn't submitted.
•	If you get stuck, document what you tried and where you got stuck. Problem-solving transparency matters.
•	Do not copy-paste a tutorial and submit it as your own. We will ask you to explain every part of what you built.
⚠️	**The Excel template has specific formulas — do not overwrite them. Only fill the input cells.**
•	You may ask clarifying question via WhatsApp if something in the Excel or bill is unclear.

We are excited to see what you build. Good luck!
